What's New in the OutlookFreeware Utility Manager (former OutlookFreeware Runtime)?

OutlookFreeware Utility Manager provides the basis on which all the other Microsoft Outlook add-ins provided by its developer rely on. Its role is to provide a centralized management tool for all the tools you install on the computer, allowing the easy launching of an add-in. The installation package includes an Outlook add-in and a standalone application that you can use independently of Outlook. In case you consider that the add-in is not necessary, you can disable it from within the mail client and use the GUI interface for managing installed OutlookFreeware.com add-ins. The main GUI of OutlookFreeware Utility Manager is very simple, comprising a few options for organizing the detected tools. The desired add-in can be selected with the help of the so-called 'Utility Manager', which is capable of detecting and displaying the add-ins that are present in your system. To do so, it analyzes the content of a special folder in the AppData directory. In case the list contains a large number of items, the searching and the filtering functions can be of great use. Additionally, you can delete individual entries and create a favorites folder to store the most frequently used utilities there, for faster access. More than one program can access the same data at the same time. If two programs try to access a file simultaneously, the operating system puts both of them in a special place called the 'waiting mode', and if one of them makes an update to the file at that time, the other must wait before being able to access the file. If two or more programs are all trying to access the same file at the same time, the system's task scheduler determines how to allocate the time they have to work. Operating systems guarantee the file access privileges from different applications to prevent the

damage to the system files and to the operating system that could occur if one or more applications were to mistakenly modify a file they were not supposed to.
